

Free Community Prostate Cancer Screening

Take charge of your health — early detection saves lives.

Prostate cancer is one of the most common cancers among men, but it's highly treatable when caught early. Because symptoms often don't appear until later stages, regular screening is essential—especially for men at higher risk due to age, race, or family history.

Join us **Saturday, September 20** for a free screening focused on early detection and prevention. Each screening includes:

- PSA (Prostate-Specific Antigen) blood test
- Targeted cancer history review and prostate exam
- Consultation with a nurse to review next steps

Who Should Attend:

Men age 45 and older—especially those who are Black/African American or have a family history of prostate cancer.

Event Details:

- **Date:** Saturday, September 20, 2025
- **Time:** 9 am – 12 pm
- **Location:** Capital Health Primary Care – Brunswick Avenue (832 Brunswick Avenue, Trenton, NJ)
